

SUBJECT: MATHEMATICS

CLASS: X

CHAPTER 14: STATISTICS

Curiosity Question:

The mean of 'n' observations is $\bar{X}$, if the first term is increased by 1, second by 2 and so on, what will be the new mean?

Answer Guide:

- What is a Classmark?
- How will you find the 'mean' of raw data?
- What are the measures of central tendency?

Experiential Learning

The concept of Mean, Median and Mode of raw data and grouped data is clearly demonstrated with the help of the video link
