

AI in Industries

A background image of a yellow industrial robotic arm in a factory setting, with a blue tint overlay. The arm is positioned on the left side of the frame, reaching towards the center.

INTRODUCTION

1

AI applications make many professions work at higher ease than before.

2

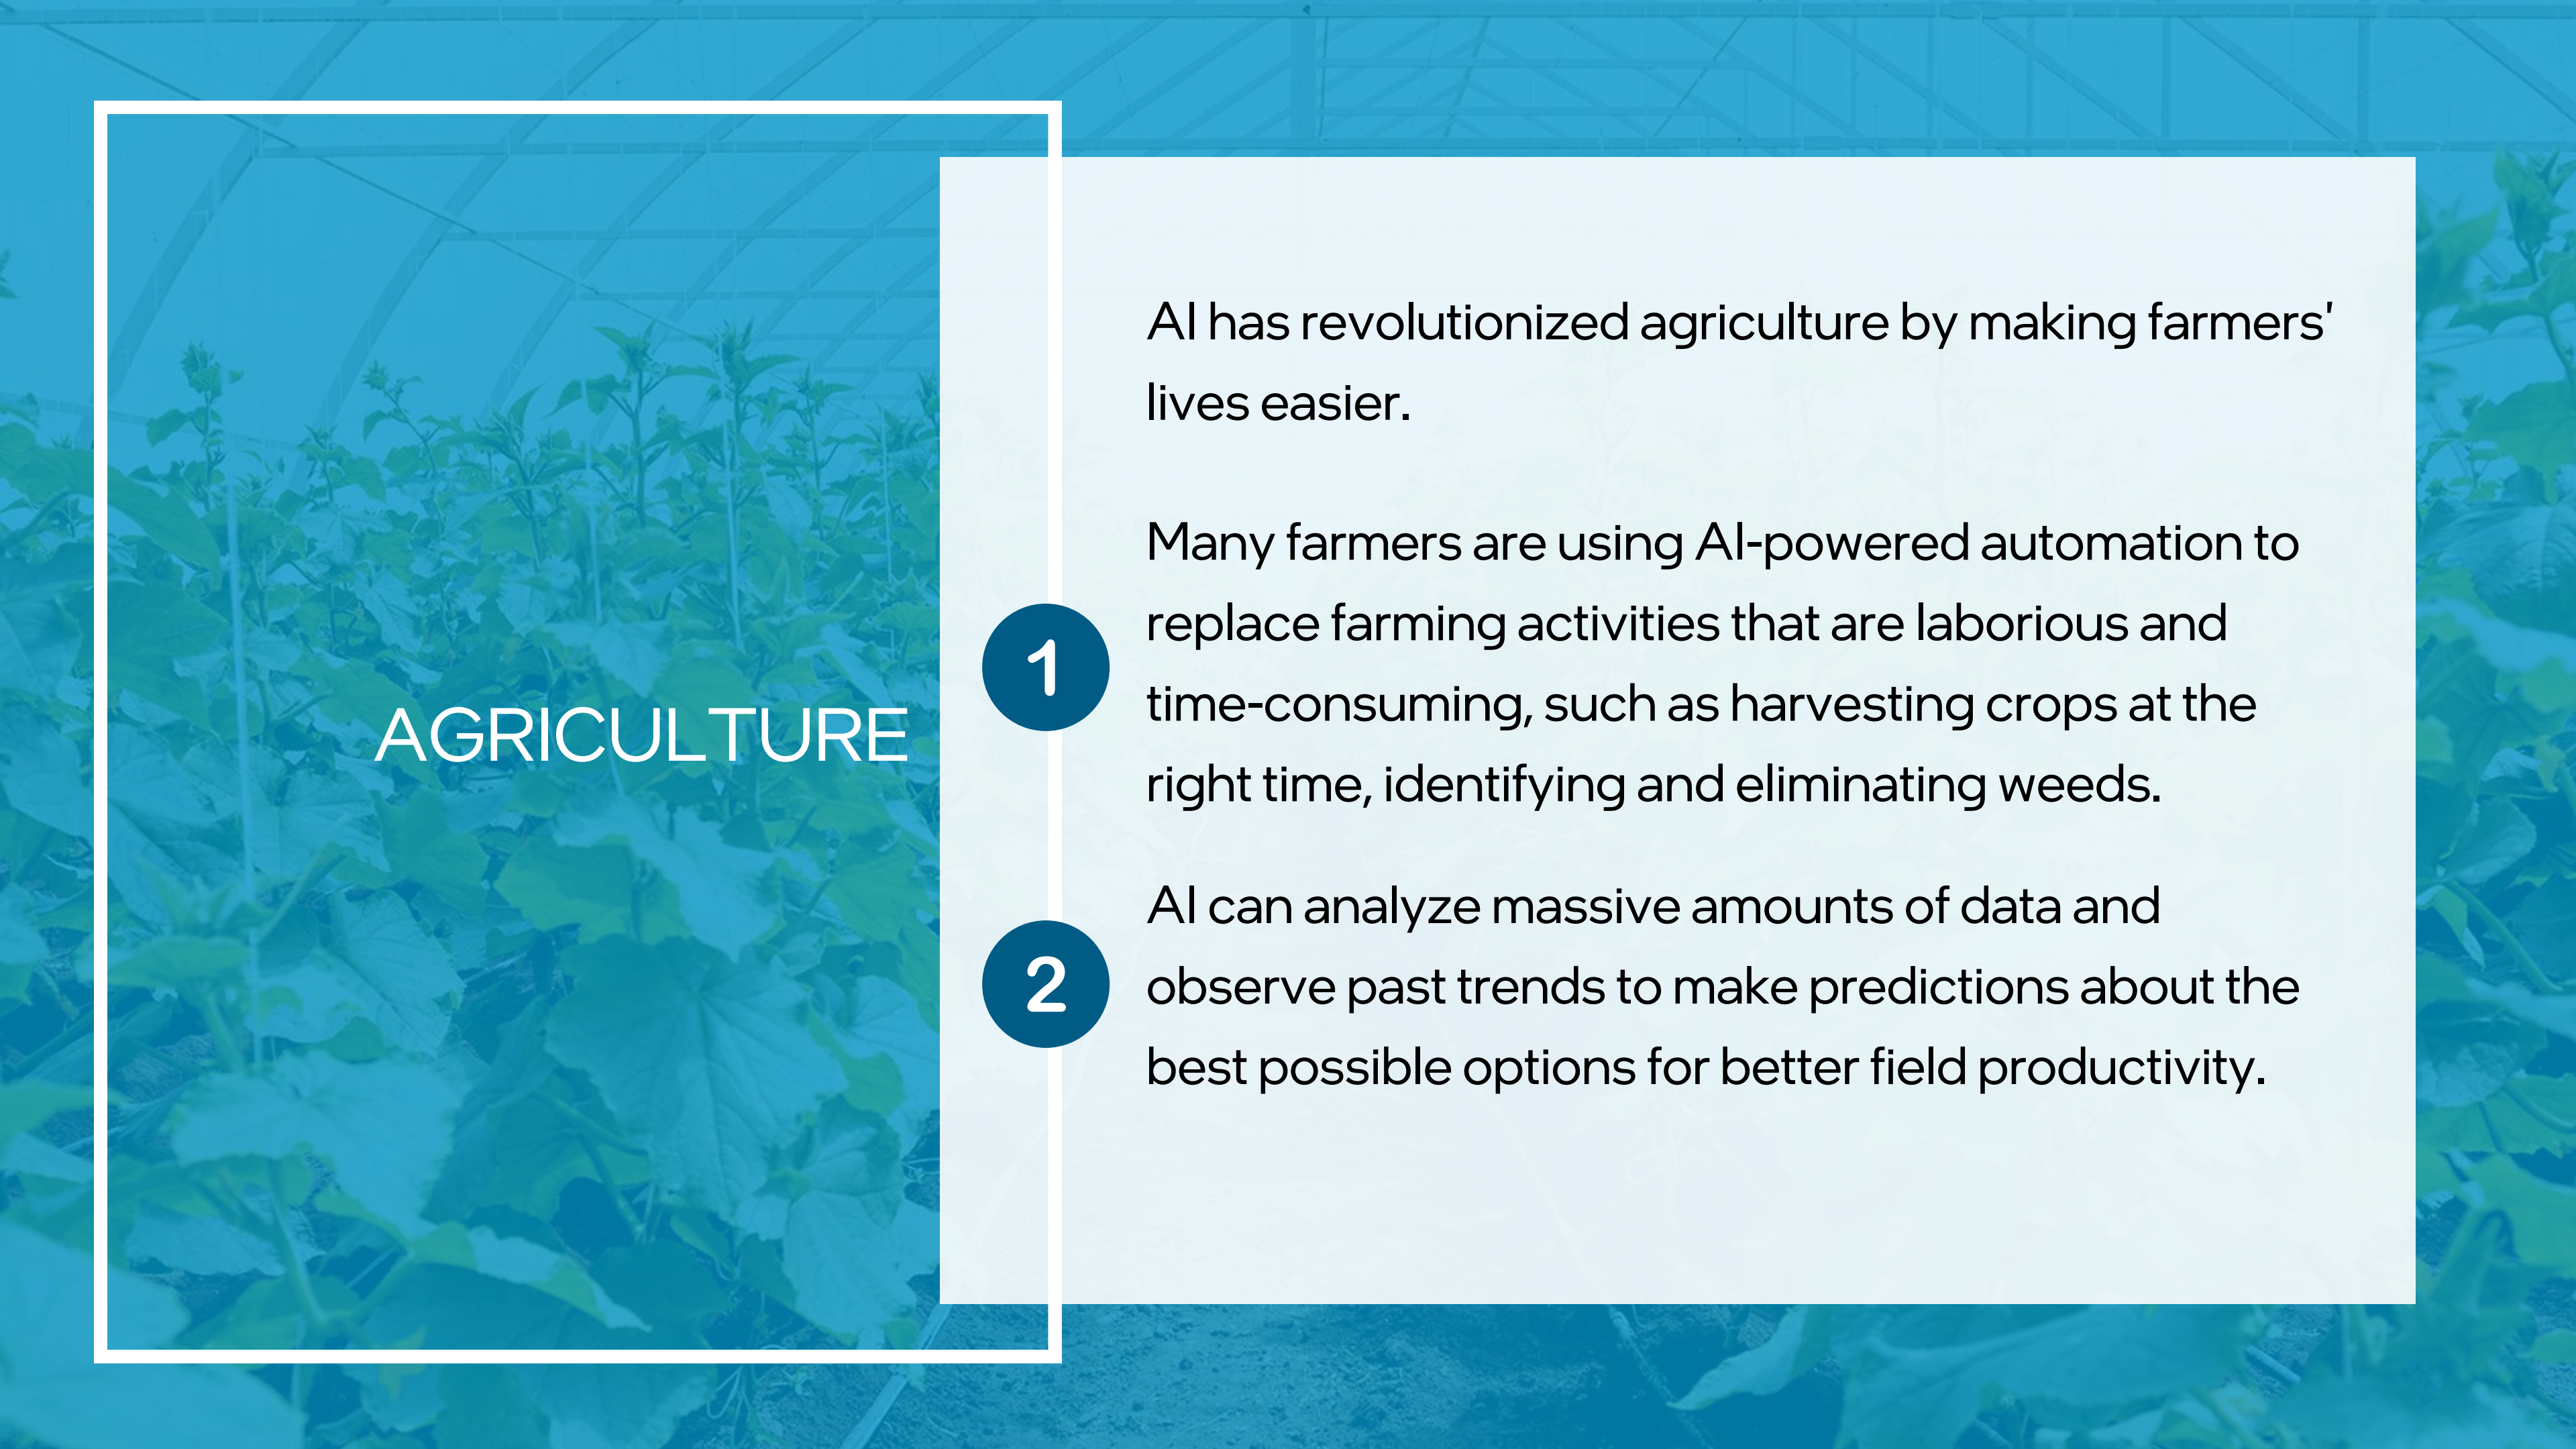

AI is revolutionizing many industries and changing how work happens.

3

AI has crept into almost every industry in today's time.

We will discuss six industries that use AI. These industrial AI applications are very easy to understand and are of aid and use to us all. Let's begin then.

AGRICULTURE

1

AI has revolutionized agriculture by making farmers' lives easier.

Many farmers are using AI-powered automation to replace farming activities that are laborious and time-consuming, such as harvesting crops at the right time, identifying and eliminating weeds.

2

AI can analyze massive amounts of data and observe past trends to make predictions about the best possible options for better field productivity.

HEALTHCARE

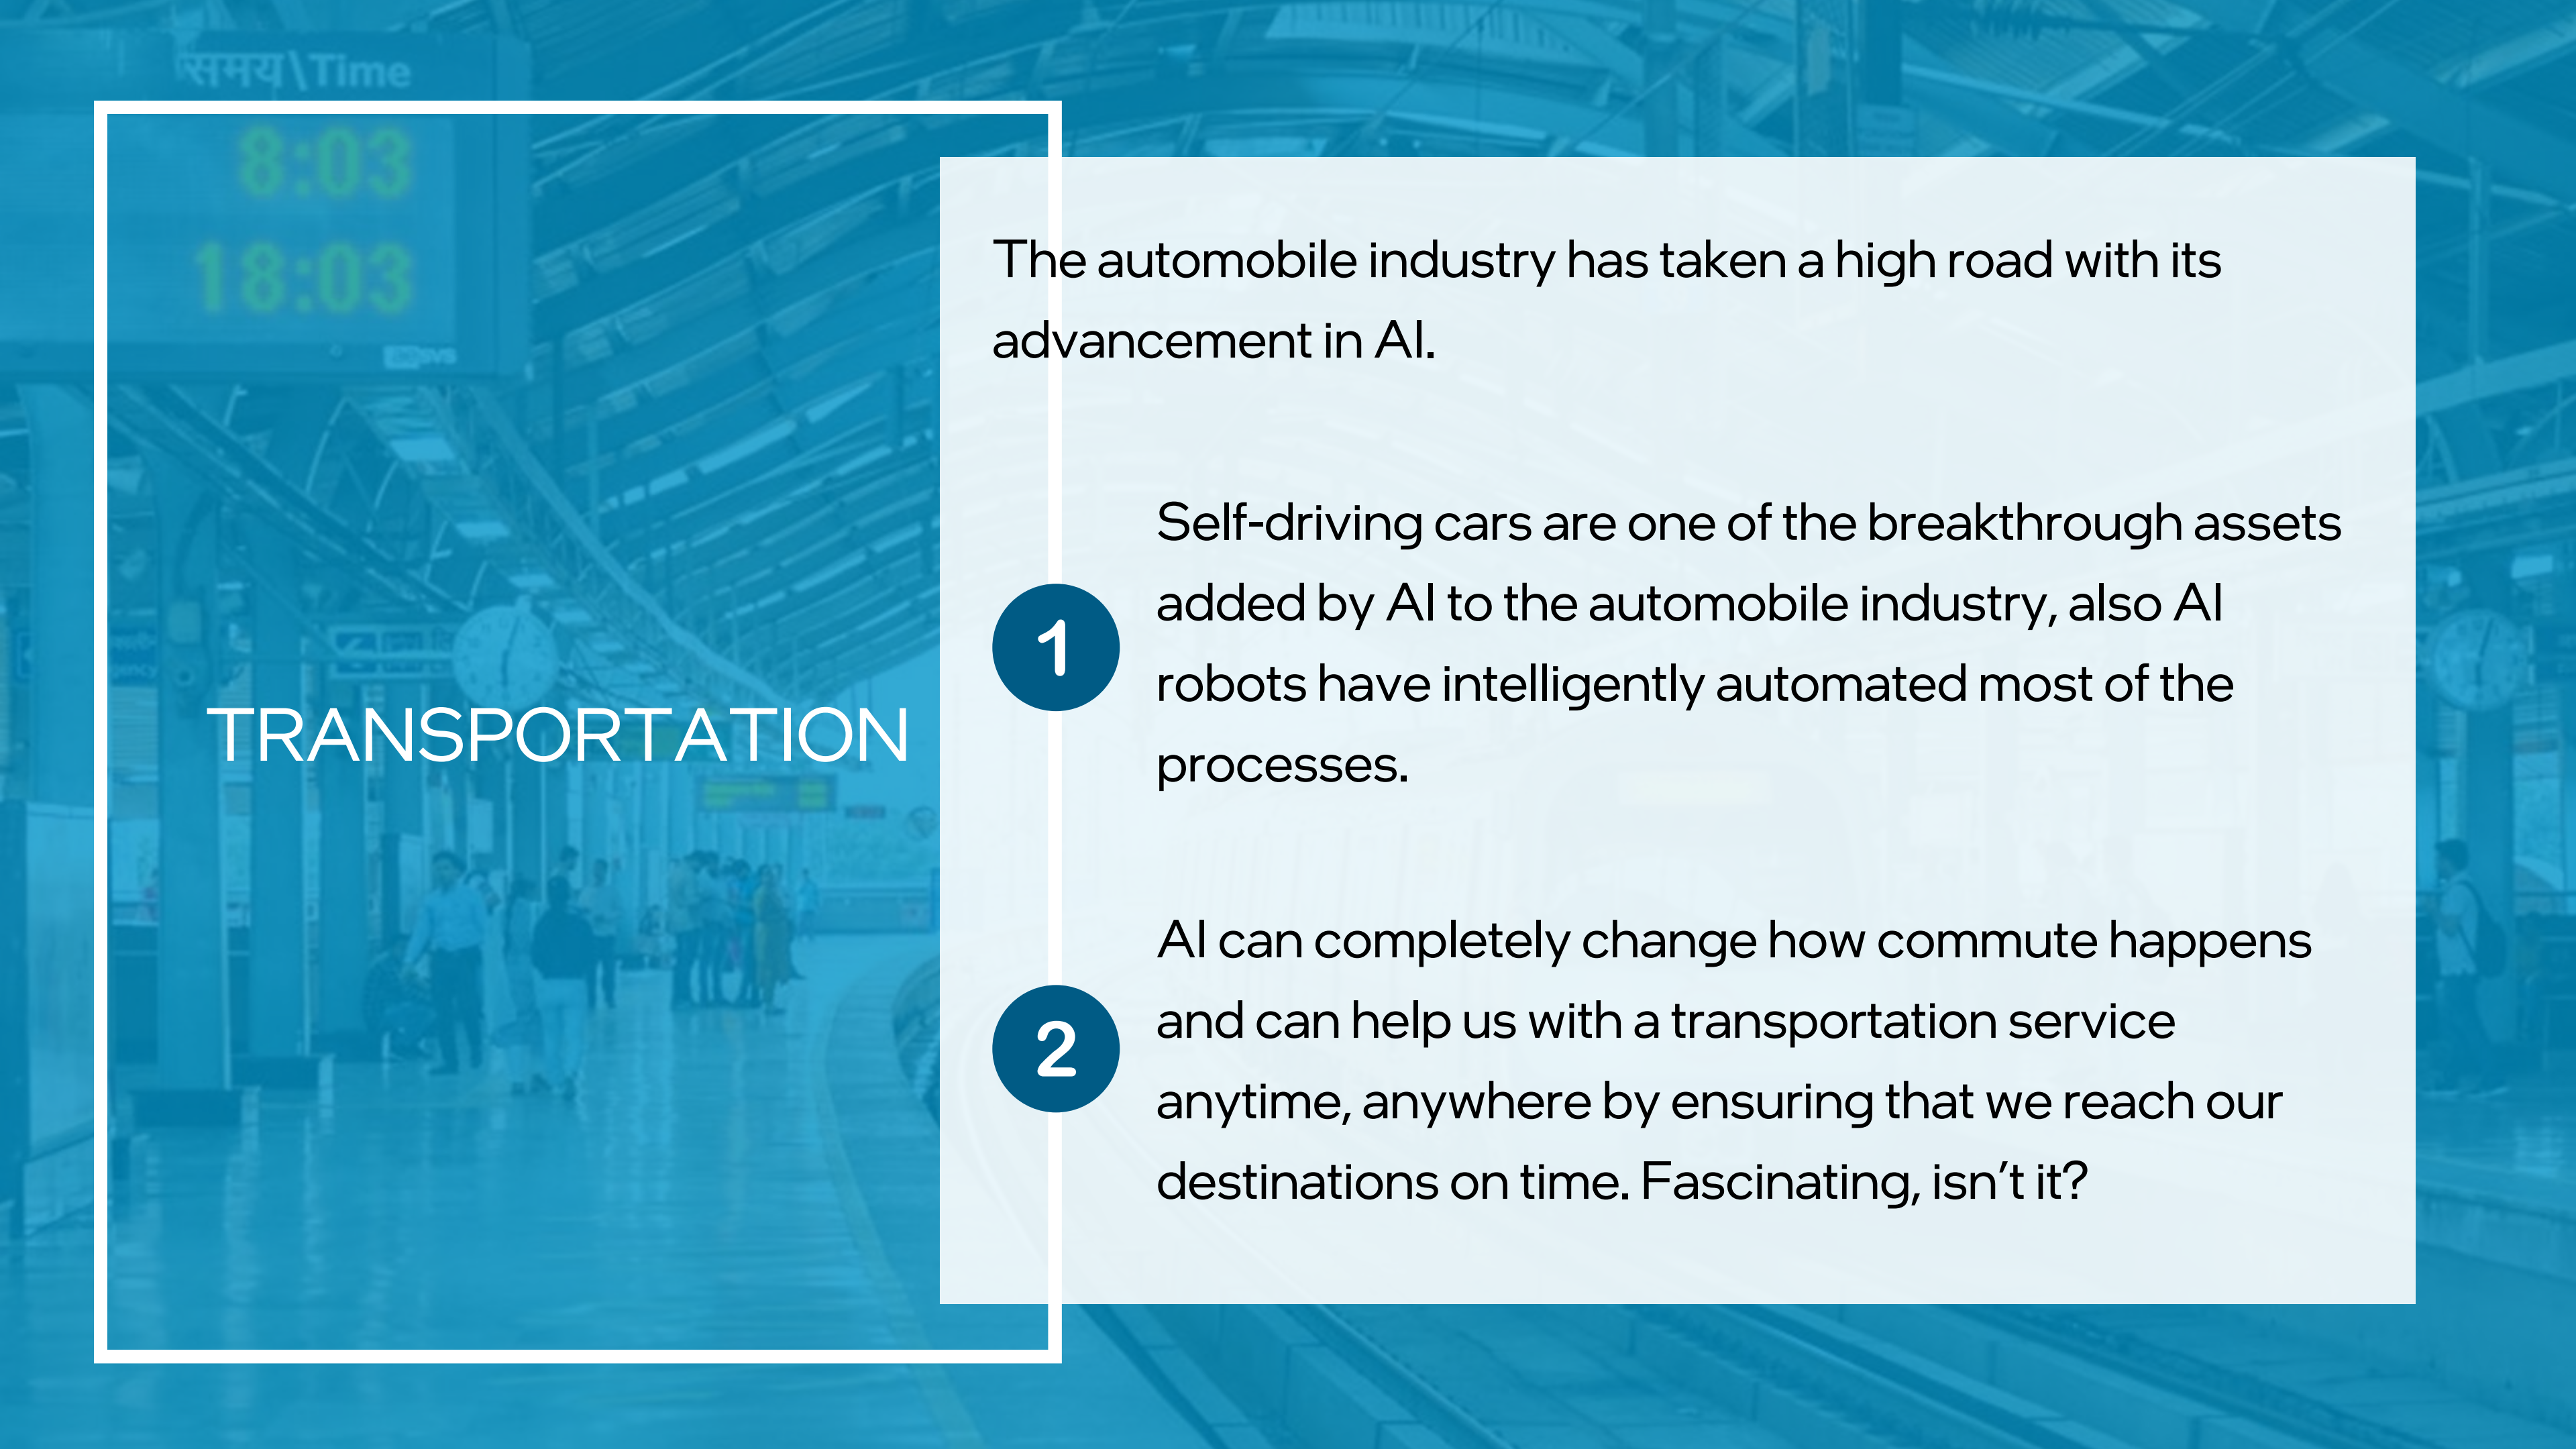

We witnessed how AI became our savior for many difficult situations, such as the COVID-19 pandemic. It is no surprise that AI is of tremendous help in medicine.

1

Doctors have used AI to predict the best treatments for diseases as serious as cancer. AI can detect tumors with the precise location and size as if it knows you inside out.

2

AI, once trained extensively, can diagnose diseases more efficiently and suggest better treatments.

TRANSPORTATION

The automobile industry has taken a high road with its advancement in AI.

1

Self-driving cars are one of the breakthrough assets added by AI to the automobile industry, also AI robots have intelligently automated most of the processes.

2

AI can completely change how commute happens and can help us with a transportation service anytime, anywhere by ensuring that we reach our destinations on time. Fascinating, isn't it?

A woman with dark hair, wearing a yellow shirt, is looking at a laptop screen. The background is a blurred office setting with a desk and a water bottle.

PRIVATE OFFICES

1

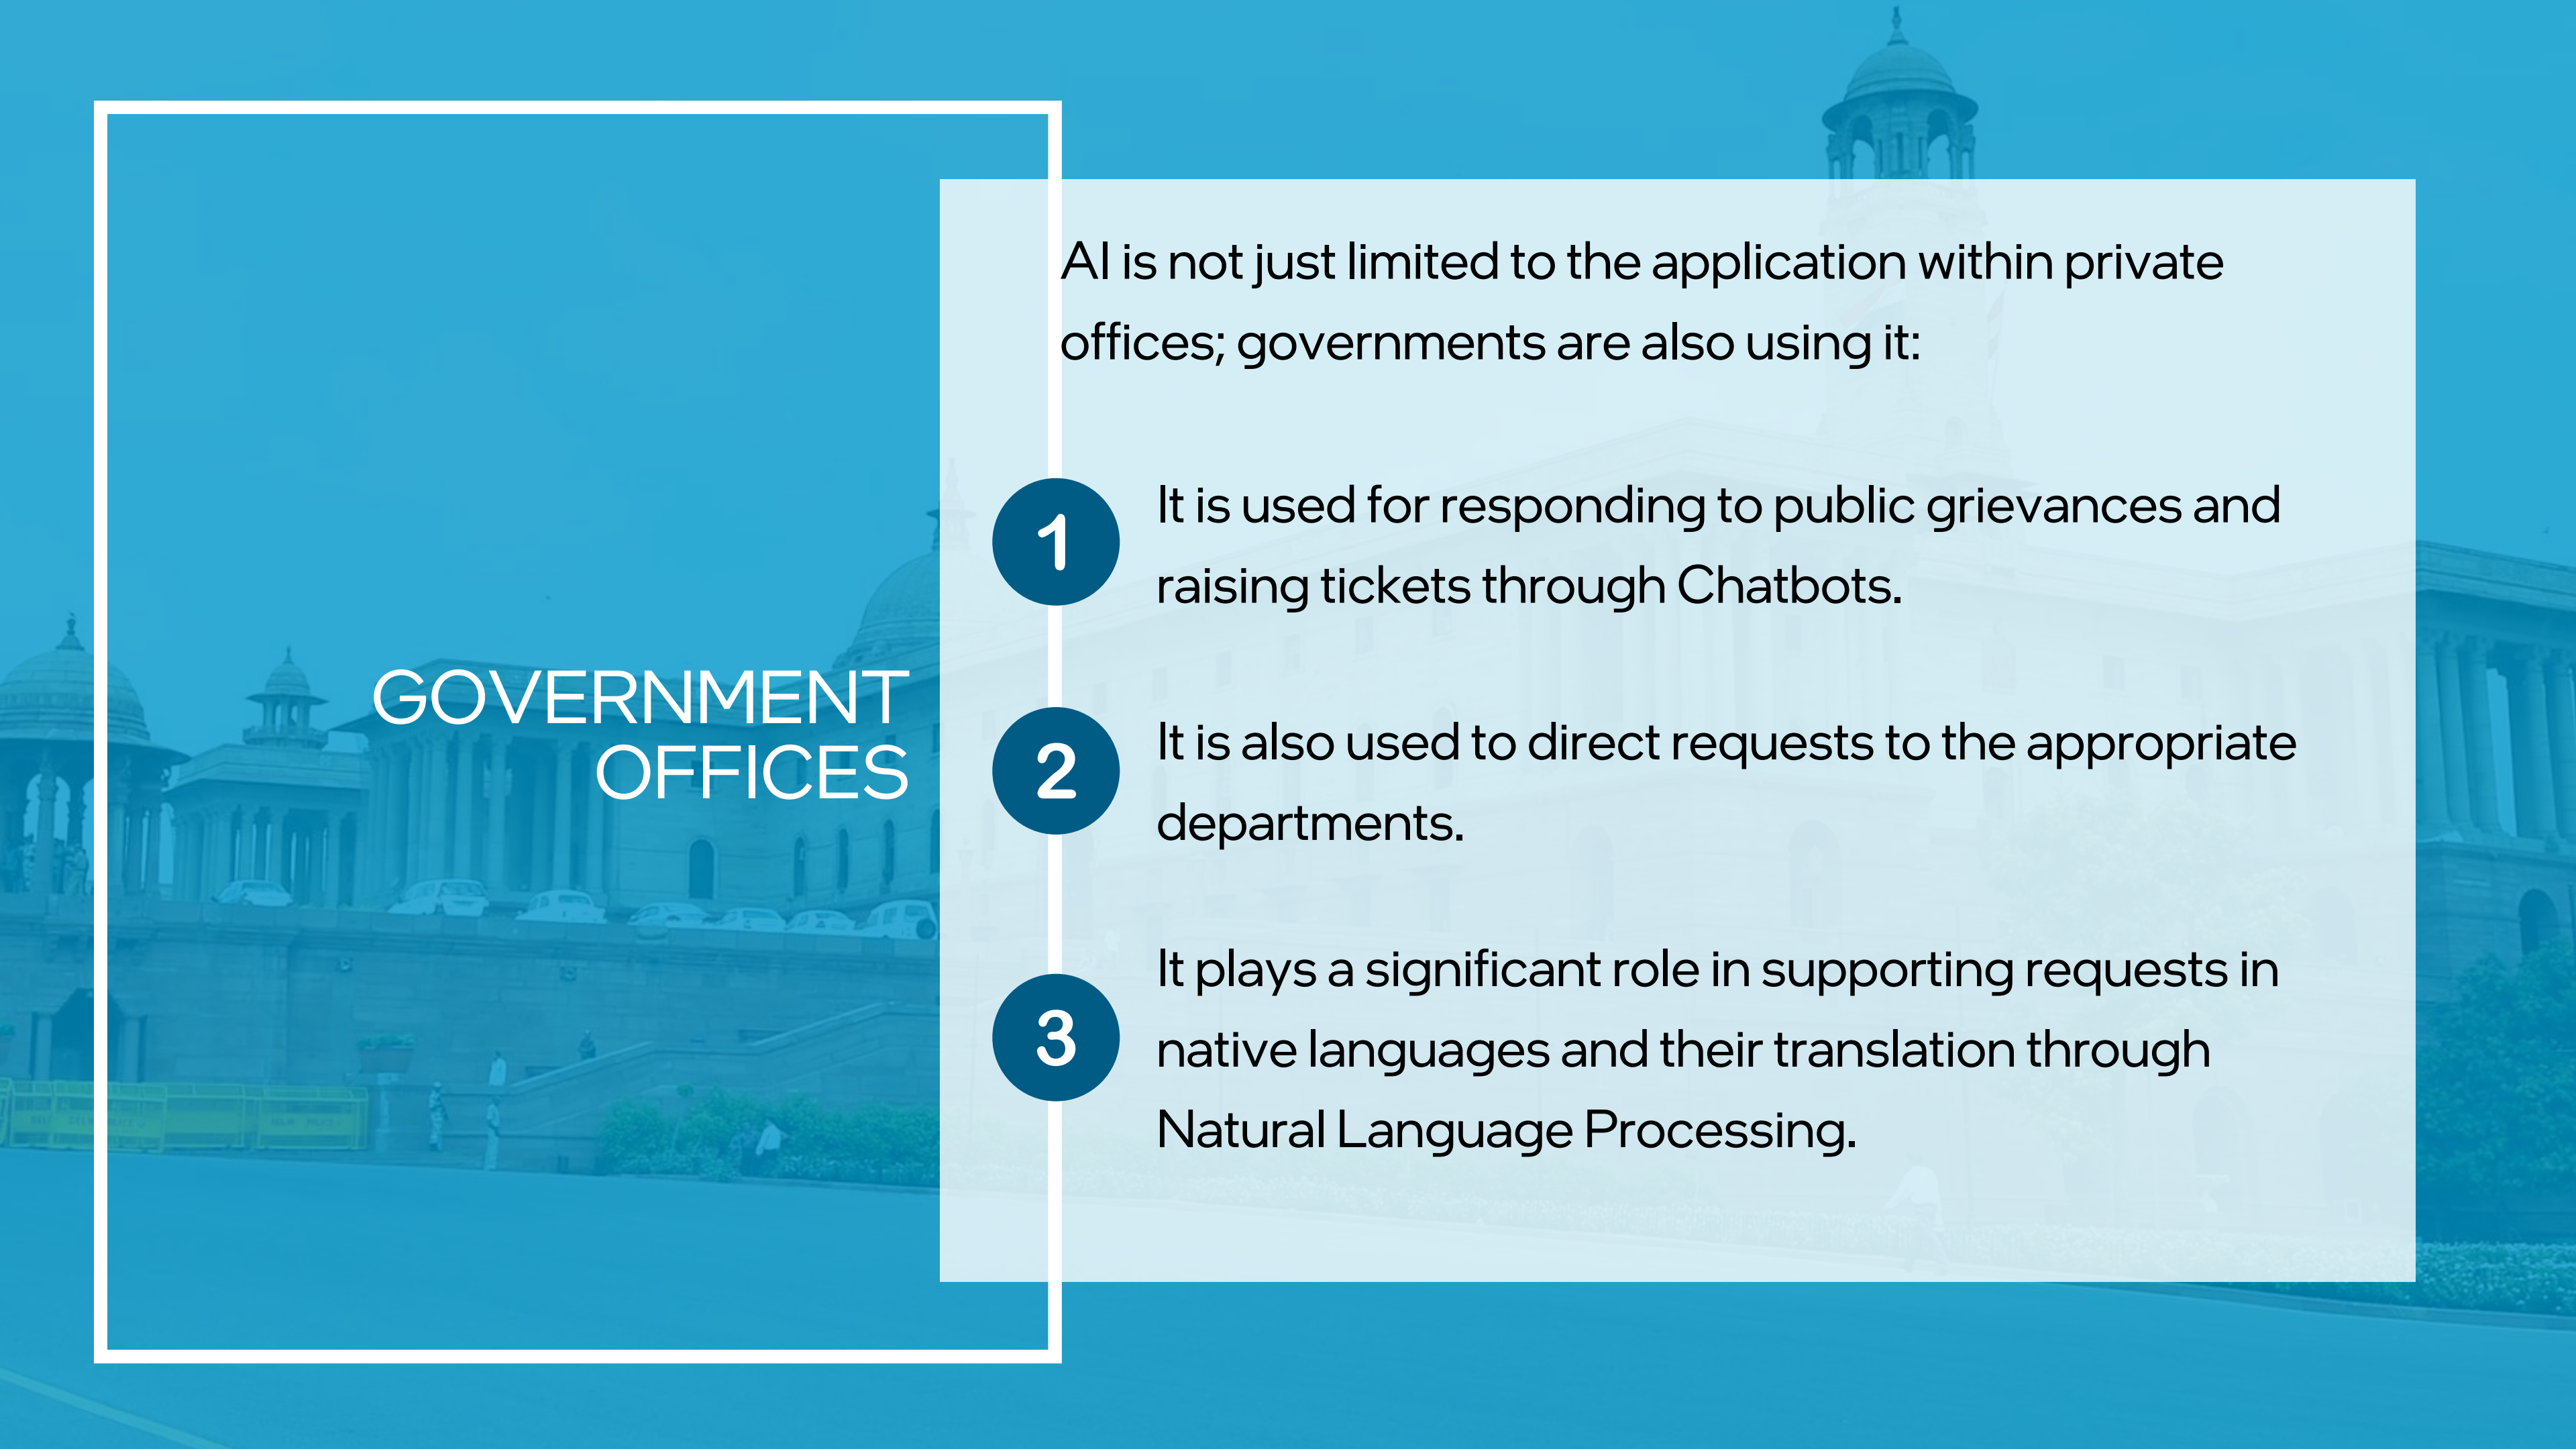

AI is getting incorporated into HR management. From recruitment to employee counseling, machines are doing their smart work.

2

AI makes the documentation process easy by automating the process of filing manual bills into an excel sheet.

3

Chatbots are used to respond to frequently asked customer queries.

GOVERNMENT OFFICES

AI is not just limited to the application within private offices; governments are also using it:

1

It is used for responding to public grievances and raising tickets through Chatbots.

2

It is also used to direct requests to the appropriate departments.

3

It plays a significant role in supporting requests in native languages and their translation through Natural Language Processing.

ART

If you think that AI is only useful in organized sectors, well, you're wrong. Interestingly, many artists use AI, as well!

1

AI can create music on its own.

2

Many AI-powered tools are also used to create commercial art. For instance, you all must have heard EDM (electronic dance music) or might have seen paintings made by AI.

3

It can be used to automate repetitive tasks to give the artist more headspace for actual creativity.
