- Parts Of Plants And Their Functions

PLANTS

Plants are living things. We see different kinds of plants around us. Some are big and some are small. They all grow and die. They need air, water, soil and sunlight to grow. Plants make our world colourful.

PARTS OF A PLANTS

A plant has many parts. Each part is important for the plant.

1. **Roots** usually grow under the ground. They fix the plant to the soil.
2. **Leaves** make food for the plant.
3. **Stem** supports the plant. Leaves, flowers and branches grow from it.
4. **Flowers** produce fruit.
5. A **fruit** has seeds inside it.
6. **Seeds** grow into new plants.
