

File Handling

Reading the contents of the text file in python

Open a text file: <code>f1=open("namelistxiiia.txt","r")</code>	File must exist
Open and read the text from file: using read():	
<code>file=open("namelistxiiia.txt","r")</code> <code>print (file.read())</code>	Whole text will be read
Open and read the text from file: using readline():	
<code>file=open("namelistxiiia.txt","r")</code> <code>print (file.readline())</code>	Single line it will read
Open and read the text from file: using readlines():	
<code>file=open("namelistxiiia.txt","r")</code> <code>print(file.readlines())</code>	
<code>file=open("namelistxiiia.txt","r")</code> <code>lines=file.readlines()</code> <code>for line in lines:</code> <code> print(line)</code>	Printing the line
