

File Handling

Sending data in file, i.e. to create / write in the file

Write in a text file: <code>f1=open("namelistxia.txt","w")</code>	File should exist. If not existing then it will be created.
Open and write the text in the file: using write() :	Parameter has to be string. Numeric data need to be converted to str()
<code>file=open("namelistxia.txt","w")</code> <code>file.write(" my name is: abcd")</code>	Text will be written in the file. If there were any contents, then it will be over written.
Open and write the text in the file: using writelines() :	
<code>file=open("namelistxia.txt","w")</code> <code>file.writelines(" my name is: abcd\n efgh\n ijkl\n mnop")</code>	multiple lines will be written
