

Learning Activity

Class –V Subject – EVS
Chapter – 1 Super Senses

Activities : Project and Poster/ Collage

Aim: To understand and identify animals on the basis of their super senses and to spread awareness to protect wild life.

Activity - 1

Project

Material Required

Scrap book / loose A4 size sheets of any colour, sketch pens/ glitter pens, fevicol, pictures of chosen animals etc.

- Collect information about any five animals of your choice having unique super senses.
- Paste their pictures and write about their super senses.(Use one page per animal)
- Design a beautiful cover page for your project and write all details like, your name, subject, class, section and topic on it.

Activity –2

As we know number of tigers and many animals with unique characteristics are on the verge of extinction and some have already been declared as endangered species. So to create awareness among students a poster/collage making activity will be done.

Instructions:

- Draw a colourful poster/ collage on the topic “Save Tigers” on A4 size sheet of any colour.
- Write a catchy slogan for your poster/ collage.

Collage given below as an example:

THE TIGER

TIGRESS TALK

The tigress likes to remain confined to her area and generally hunts closer to her primary location as compared to her male counterpart. Yet the territories of older females overlap with that of males.

TIGER POWER

The white spots behind its ears help other tigers to identify it in the gloom of the jungle. The roar of a Royal Bengal Tiger can be heard up to 2 kms.

CREATIVE COAT

Tigers have stripes on their skin too. Even if they are shaved off completely, the distinctive pattern on their skin will still be visible.

GIVE ME A PAW!

A tiger's paw consists of a pad and four toes. A fifth toe is commonly called the dew claw. They are retractable and are a part of the tiger's weaponry.

TIGER STEALTH

A male tiger weighs about 180 kg and the female about 140 kg. Even heavy bodies, tigers are not slow. They can reach a speed of up to 65 km/h. They hunt at night and like to hunt alone. They usually kill their prey by biting on their neck or the back of their head. Tigers mainly rely on their sight and hearing rather than smell when hunting prey. Tigers may eat up to 40 kg of meat at one time.

ARE TIGERS MAN EATERS?

Very rarely a tiger will either accidentally or purposely kill a man, but will not eat him. Mostly it is due to some wound or disability or old age. A man-eater is very rare, only about three or four in a thousand.

TIGERS
ARE
EXCELLENT
SWIMMERS

STRIPE STOP

Every tiger in the world is unique. They all are designed differently! No two tigers have the same pattern of stripes.

FOOD FACTS

Tigers can fast for several days but due to their big size they get hungry faster. A tiger cannot survive without food beyond 2-3 weeks.
