There are 7 basic symbols in Roman System which are used to represent different numbers.

ROMAN	I	V	X	L	C	D	M
HINDU-ARABIC	1	5	10	50	100	500	1000

All roman numerals are formed by combining these letters.

Any roman numeral that comes after a larger numeral is added to it.

Any smaller roman numeral that appears before a larger numeral is subtracted from it.

I can be subtracted from V and X only.

There is no symbol for zero and no place value system.

Ascending and
descending order

Comparison of
numbers

Ascending order is a sorting method in which the sort starts from the *lowest to the highest* or the *smallest value to the largest value*.

Arranging the numbers from a larger value to smaller value is known as *descending order*. It is also known as the *decreasing order*.

Rule 1: The number/numeral having more digits is greater.

Ex $45,678 < 5,67,897$

Rule 2: If two numbers have the same number of digits, we compare them on the basis of their extreme left digits.

Ex $45,679 < 56,786$

$3,87,943 < 3,89,943$
