FOCUS SPOT- 1

CHAPTER 10, MENSURATION
TOPIC /
CONCEPT PERIMETER AND AREA

FOCUS SPOT Statement questions related to perimeter and area

WHY Students find difficulty in statement sums when statements are moulded and they get confused where they have to find area and where they have to find perimeter.

Suggestion Educator will clear the concept of perimeter and area to the students and telling them to read the statements carefully and find the words in the statement which are helpful to get what we have to find in the question either perimeter or area.

Example: when the words like fencing, border, margin, going around, boundary, framing, periphery are there in the statement so we will find perimeter and some words like region, zone, sector, domain, patch, spot are there so we will find area.

In some questions cost is given, while reading the statement if cost written in per meter, per cm, per mm etc. So we will find perimeter and if cost is written in per sq. Units. So we will find area.

IMPACT The students will not be able to comprehend the statement problem and will not be able to understand either to find perimeter or area.
